

#### Why future scenarios?

Scenarios are an important tool for assessing potential social-Regional scenarios are useful to explore larger scale change with a broad ecological change for a location, and can be explored across a region, range of stakeholders, but may not reflect solutions and values preferred at city, or neighborhood. local levels.

Scenario approaches vary based on diverse planning and decision support needs and objectives. CAP LTER uses three distinct scenario logics.

Transformative Futures Desirable, normative outcomes that are radical departure from

status quo Strategic Futures

Existing strategies and goals based on governance document analysis (i.e., not co-produced)

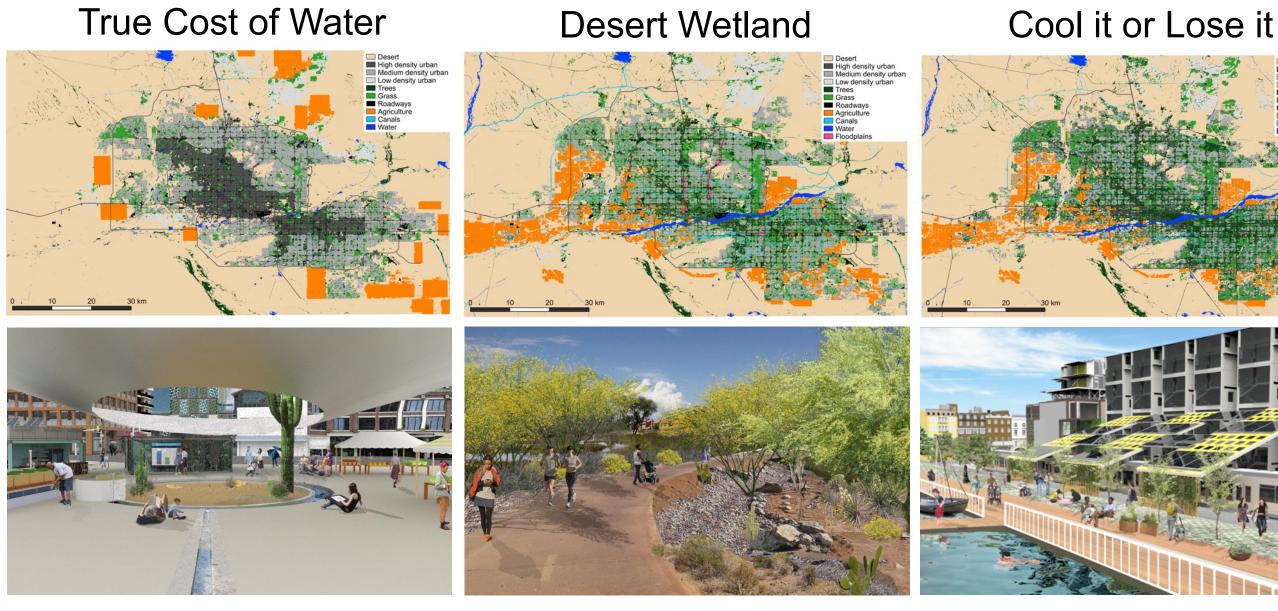

Adaptive Futures Plausible scenarios in response to extreme events

Time

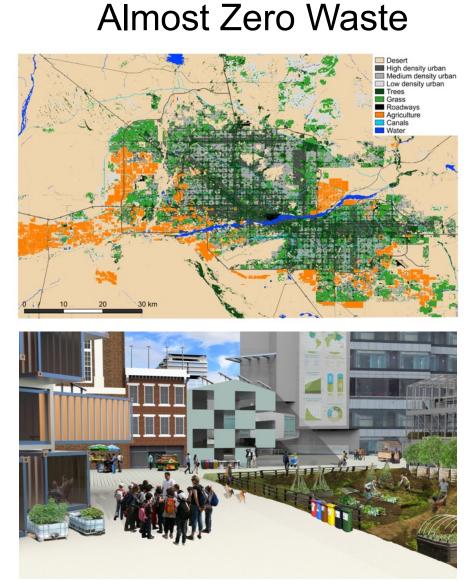

### Existing CAP scenarios: Regional futures

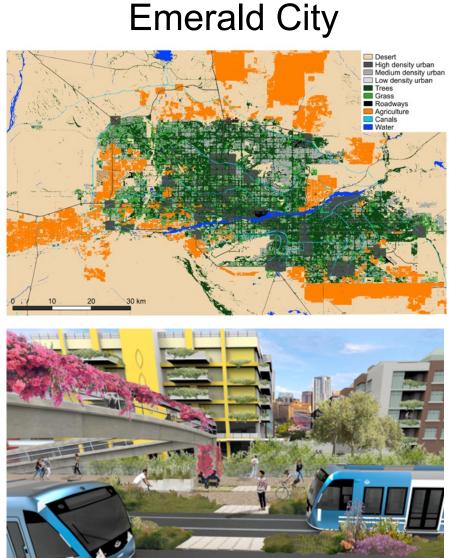

From 2014-2016 a group of diverse stakeholders developed 3 adaptive and 3 transformative futures for the Phoenix region.

### Adaptive Futures

## Transformative Futures

### Methods

environment.

The social-ecological-technological

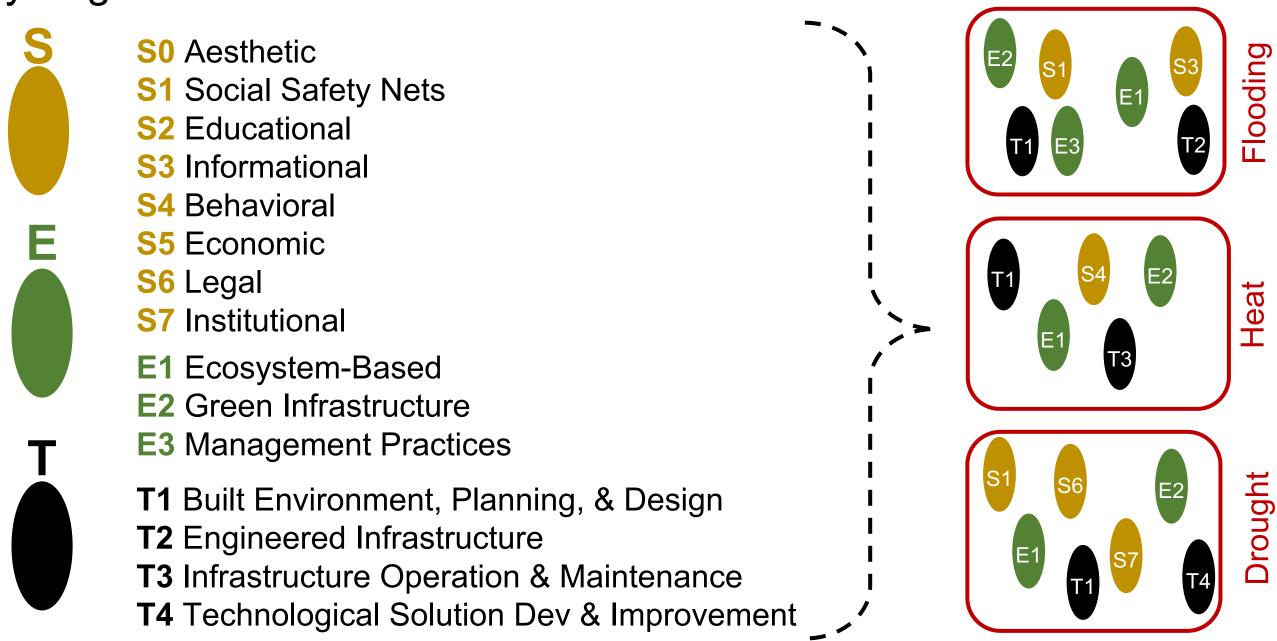

#### The Phoenix Area Social Survey (PASS 2011) provides a unique opportunity and resource to explore how local stakeholders perceive and value their

boundaries.

#### Results

By comparing and contrasting bottom-up strategies from PASS and top-down strategies from municipal plans, we are able to explore the spatial heterogeneity of adaptation perspectives and isolate potential synergies and conflict.

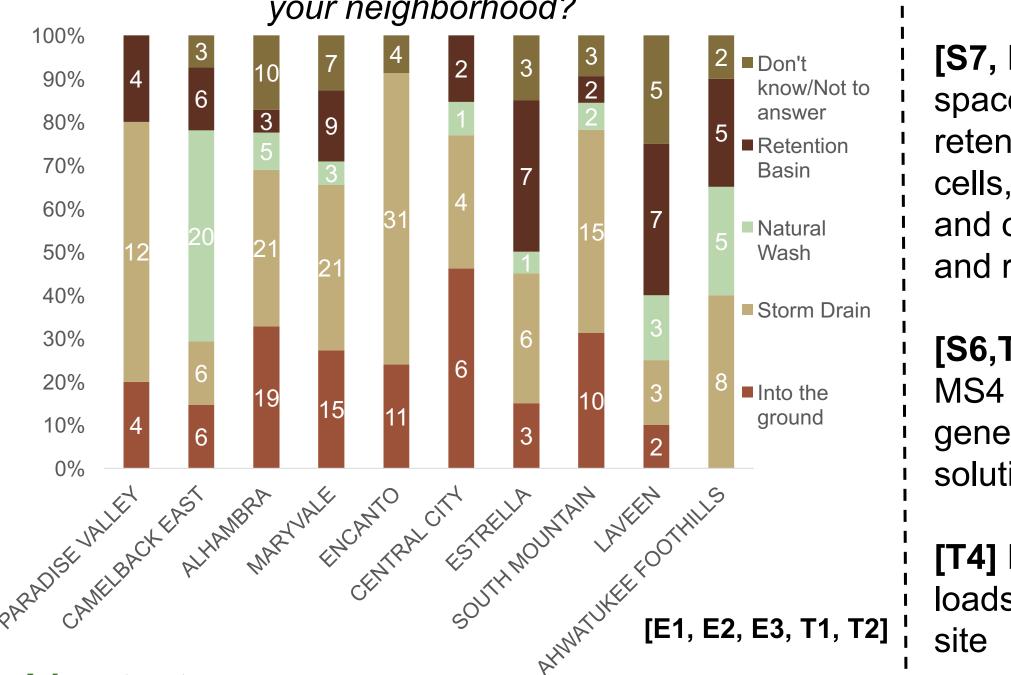

# level (left) and supported widely across Villages (right).

Municipal heat strategies:	S at
Adopt thermal comfort and	4
sustainability standards for	3.5
building form in Downtown to	
increase thermal comfort,	3
minimize heat gain, and	2.5
enhance air flow	
	2
Engineered shade standards should be	1.5
incorporated in the current	1
zoning ordinance to require	
structures to be <b>designed</b>	0.5
with non-heat loading	0
construction materials	I 、

#### What happens to water during heavy rain in your neighborhood?

### Next steps

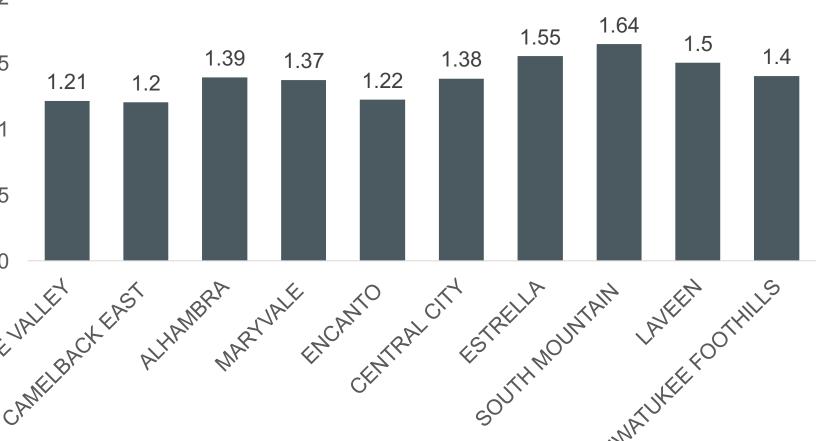

The results of this work will be used to inform initial scoping and framing of upcoming UREx SRN / CAP LTER participatory scenario workshops for South Phoenix in May 2018.

Acknowledgements: This project was made possible by CAP LTER summer graduate research grant, thanks for the support!

Engineering strategies (T2) to address **heat** are promoted at the city

Support for Engineering new paving materials that absorb less heat in village scale. 1(strong)–4(weak)

may not align with strategies to address flooding at the city level (right)

#### Municipal flooding strategies:

[**S7**, **E1**, **E2**, **T4**] Pilot open space projects to increase retention capacity with silva cells, orchards, rain gardens, and other water harvesting and retention mechanisms

[S6,T4] Renegotiate the MS4 permit to allow nextgeneration stormwater solutions in the District

[T4] Reduce stormwater loads and harvest water on-
