

# LOW IMPACT DEVELOPMENT TOOLKIT

Low Impact Development (LID) is a sustainable approach to stormwater management that utilizes the landscape to absorb storm runoff in order to reduce offsite flows that can contribute to the pollution of natural waterways, urban flooding, and infrastructure costs.

## YOU'RE INVITED! **Green Infrastructure Workgroup Meeting & Presentation**

April 16, 2015

1:00PM-3:00PM

### **Location:**

Oasis Water Campus  
7070 W. Northern Avenue,  
Glendale, AZ 85303

### **Presentation Description:**

The Cities of Mesa and Glendale partnered to develop the Low Impact Development (LID) Toolkit with funds from a WIFA grant. Logan Simpson Design and Dibble Engineering developed the toolkit which features current LID technologies, engineering standards, and case studies of relevant existing projects. Cities will benefit by utilizing this resource to develop or redevelop landscapes that absorb storm runoff in order to reduce offsite flows that can contribute to the pollution of natural waterways, urban flooding, and infrastructure costs.
